

BigTex Sample

Local-first agentic LaTeX

May 4, 2026

1 Why this exists

BigTex is a prototype for an agent-first desktop LaTeX editor. The editing surface stays local and fast, compilation happens out of the renderer process, and agent output is reviewed before it changes project files.

2 Try the loop

Edit this file, save it, compile, then ask the agent to improve a paragraph or fix a compiler diagnostic. If the agent returns a unified diff, BigTex can apply it explicitly.
